

4 Channel Constant Current DMX512 & RDM Decoder

Model No.: D4C-L(350mA) / D4C-L(700mA)

RDM/Stand-alone function/Two PWM frequency/Linear or logarithmic dimming/Numeric display

Features

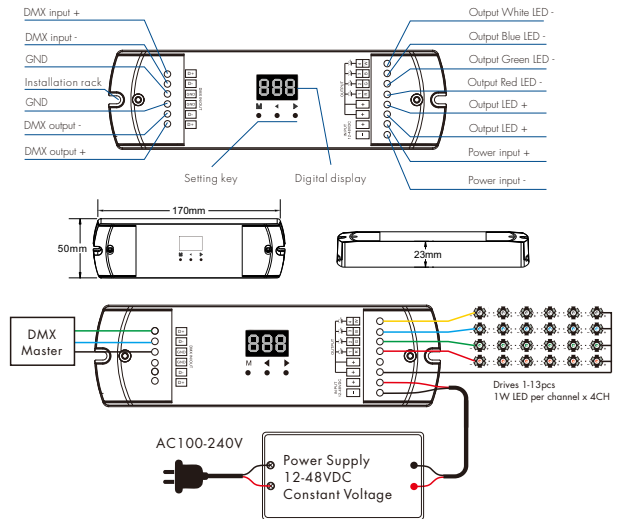

CE RoHS EMC LVD

- Comply with the DMX512 standard protocols.
- Digital numeric display, set DMX decode start address by buttons.
- RDM function can realize intercommunication between DMX master and decoder.
For example, DMX decoder address can be set by DMX master console.
- 1/2/4 DMX channel output selectable.
- PWM frequency 2000/500Hz selectable.
- Logarithmic or linear dimming curve selectable.
- Stand-alone RGB/RGBW mode and 4 channel dimmer mode selectable, which be controlled by buttons with built-in programs, instead of DMX signal.

Technical Parameters

Input and Output		Environment	
Input voltage	12-48VDC	Operation temperature	Ta: -30°C ~ +55°C
Output voltage	4 x (3-6)VDC	Case temperature (Max.)	Tc: +85°C
Output current	4CH, 350mA or 700mA/CH	IP rating	IP20
Output power	4 x (1.05-1.6.1)W (350mA) 4 x (2.1-3.2.2)W (700mA)	Warranty and Protection	
Output type	Constant current	Warranty	5 years
Safety and EMC		Protection	Reverse Polarity Short circuit
EMC standard (EMC)	EN55032:2015, EN61000-3-2:2014, EN61000-3-2:2013, EN55024 :2010/A1:2015	Weight	
Safety standard (LVD)	EN 61347-1:2015 EN 61347-2-1:2015	Net weight	0.152kg
Certification	CE, EMC, LVD	Gross weight	0.169kg

Mechanical Structures and Installations

- The LED quantity at each channel can be different, the decoder could auto check and output a proper voltage to each channel according to its LED quantities.
- The decoder works on buck mode, the voltage of power supply should be greater than the total voltage of the series LEDs.
- If connected with single color LED, and the decode mode set as 1 channel decode, the output current can be 700, 1050 or 1400mA when connecting 2, 3 or 4 channel, but the multiple LED output can not be connected together, otherwise result in error output current.

Operation

System parameter setting

- Long press M and ◀ key in the same time for 2s, prepare for setup system parameter: decode mode, output PWM frequency, output brightness curve, automatic blank screen, short press M key to switch four item.
- Decode mode: short press ◀ or ▶ key to switch 1/2/4 channel decode mode("d-1", "d-2" or "d-4"). When set as 1 channel decode, the decoder occupy only 1 DMX address, and four channel output the same brightness of this DMX address.
- Output PWM frequency: short press ◀ or ▶ key to switch 500Hz("F-1") or 2KHz("F-H").
- Output brightness curve: short press ◀ or ▶ key to switch linear curve("C-L") or logarithmic curve("C-E").
- Automatic blank screen: short press ◀ or ▶ key to switch enable ("bon") or disable("bof") automatic blank screen.
- Long press M key for 2s or timeout 10s, quit system parameter setting.

DMX mode

- Short press M key, when display 001~999, enter DMX mode.
- Press ◀ or ▶ key to change DMX decode start address(001~999), long press for fast adjustment.
- If there is a DMX signal input, will enter DMX mode automatically.
- DMX Dimming: Each D4CL DMX decoder occupy 4 DMX address when connecting the DMX console.

For example, the defaulted start address is 1, their corresponding relationship in the form:

DMX Console	DMX Decoder Output
CH1 0-255	CH1 PWM 0-100% (LED R)
CH2 0-255	CH2 PWM 0-100% (LED G)
CH3 0-255	CH3 PWM 0-100% (LED B)
CH4 0-255	CH4 PWM 0-100% (LED W)

DMX mode
(001~999)

Stand-alone RGB/RGBW mode

- Enter stand-alone RGB/RGBW mode only when DMX signal is disconnected or lost.
- Short press M key, when display P01~P30, enter stand-alone RGB/RGBW mode.
- Press ◀ or ▶ key to change dynamic mode number(P01~P30).
- Each mode can adjust speed and brightness.

Long press M key for 2s, prepare for setup mode speed, brightness, W channel brightness.

Short press M key to switch three item.

Press ◀ or ▶ key to setup value of each item.

Mode speed: 1-10 level speed(S-1, S-9, S-F).

Mode brightness: 1-10 level brightness(b-1, b-9, b-F).

W channel brightness: 0-255 level brightness(400-4FF).

Long press M key for 2s, or timeout 10s, quit setting.

Stand-alone RGB/RGBW mode
(P01~P30)

Speed (8 level) Brightness (10 level, 100%)

Stand-alone dimmer mode

- Enter stand-alone dimmer mode only when DMX signal is disconnected or lost.
 - Short press M key, when display L-1~L-8, enter stand-alone dimmer mode.
 - Press ◀ or ▶ key to change dimmer mode number(L-1~L-8).
 - Each dimmer mode can adjust each channel brightness independently.
- Long press M key for 2s, prepare for setup four channel brightness.
- Short press M key to switch four channel(100~1FF, 200~2FF, 300~3FF, 400~4FF).
- Press ◀ or ▶ key to setup brightness value of each channel.
- Long press M key for 2s, or timeout 10s, quit setting.

Stand-alone dimmer mode
(L-1~L-8)

Restore factory default parameter

- Long press ◀ and ▶ key for 2s, restore factory default parameter, display*RES*.
- Factory default parameter: DMX decode mode, DMX decode start address is 1, four channel decode, high PWM frequency output, logarithmic brightness curve, RGB mode number is 1, dimmer mode number is 1, disable automatic blank screen.

RGB change mode list

No.	Name	No.	Name	No.	Name
P01	Static red	P11	Green strobe	P21	Red yellow smooth
P02	Static green	P12	Blue strobe	P22	Green cyan smooth
P03	Static blue	P13	White strobe	P23	Blue purple smooth
P04	Static yellow	P14	RGB strobe	P24	Blue white smooth
P05	Static cyan	P15	7 color strobe	P25	RGB+W smooth
P06	Static purple	P16	Red fade in and out	P26	RGBW smooth
P07	Static white	P17	Green fade in and out	P27	RGBY smooth
P08	RGB jump	P18	Blue fade in and out	P28	Yellow cyan purple smooth
P09	7 color jump	P19	White fade in and out	P29	RGB smooth
P10	Red strobe	P20	RGBW fade in and out	P30	6 color smooth

Dimming curve setting

Malfunctions analysis & troubleshooting

Malfunctions	Causes	Troubleshooting
No light	1. No power. 2. Wrong connection or insecure.	1. Check the power. 2. Check the connection.
Wrong color	1. Wrong connection of R/G/B/W wires. 2. DMX decode address error.	1. Reconnect R/G/B/W wires. 2. Set correct decode address.
